

LIGHT DECORATIONS
LIGHTING CHRISTMAS TREE DECORATION

Terra[®]
Christmas

From the very beginning of POLAMP corporation, which is about several dozen of years, we provide electrical supply, including illumination. **We are the biggest polish producer of lighting decorations and christmas illuminations.** In our catalogue you can find several hundred of products inspired by our childhood fantasies and the charm of Christmas.

Christmas illumination has been the basis of our offer for years, since we are one of the biggest (a leader in) producers of illumination. We manufacture it with great passion providing 4 collections: brown - interior, silver - all-purpose, gold - exterior, green - with voltage limited to 24V. We offer several hundred models of illumination. Majority of our production are LED christmas lights. Furthermore, we produce illuminated curtains, nets, meteors, garlands and rope lights. For a couple of seasons a „must have” in our offer is a projector, which displays various animations and ornaments, not only during Christmas, but on different occasions.

Sometimes light sources don't have to be the only decorations. We produce christmas illuminations, which we have over 400 in our offer. The biggest array are christmas trees, from small and traditional to huge models with animated illumination and sets of decorations. There is a similar choice among garlands. Artificial christmas trees can be adorned with solid and unbreakable PCV decorations made by POLAMP brand. We also offer projectors with many creative projects of building illumination. You can buy a base, or a fully adorned artificial christmas tree. You may also be interested in plywood decorations.

Another offering on Christmas are illuminations. We prepared more than 1000 unitary propositions and whole sets. There are many exterior illumination arrangements, which we design, mount and maintain for public squares, parks, streets etc. We use modern technology, from flat, two-dimensional decorations to detached 3D giants in which you can take a photo. Various models of illuminations with marvellous colouring and light effects are suitable for eels and lanterns.

We offer bargain prices. We have our own sales coverage and advanced logistic centre in Giżycko. Alluminium chassis has a lifetime warranty and electrical components - 24 months. We provide free shipping with our own transport. We handle all the installation and dismantling of our illuminations. It is also possible to rent a certain decoration and to warehouse it during the rest of the year. We can also take care of the maintenance and repair. We design decorations along with visualisation on the building or other space. Our customers are individual clients, companies, city and bara councils.

SPECIALIZED LIGHT DECOR

All-purpose/pole mounted decorations: star, snowflake, rosette, angel, bell:

Facade/pole mounted decorations:

Pole mounted 3D decorations:

PVC baubles and optical foil decorations:

Over-the-street decorations:

Fountains and Xmas trees:

3D DECORATIONS: tunnels, walkways, sailing ships, trains, bus, tanks, balloons, airplanes, eagles, figure sets, chairs, carriages, bears, teddy bears, reindeers, sledges, snowmen, angels, nativity scenes, giant presents, giant baubles, globes, trees:

Decorative lighting illuminates and festoons an area or object, such as lampposts or buildings. We produce over a 1000 models of Christmas light decorations, which makes us one of the industry's leaders and helps us build customer loyalty.

Many cities and municipalities across Poland as well as companies, large and small, have chosen POLAMP's decorative lighting. We're equally committed to assisting individual customers by designing and producing smaller-scale decorations.

We'll be happy to customize the production process to meet your needs. We'd like to stress that durability is the core aspect of POLAMP products. The TIG welding technology ensures quality of connections and welded joints. We tailor our products to our customers' expectations. Upon request, we custom paint decorations in your desired colour or wrap the frame in double LED rope light.

We offer state-of-the art 3D-style decorations, which prove to be customers' favorite every Christmas season. We also produce hanging, lamppost (also available in 3D), park, street, facade and module decorations.

Most of our decorative lights can be fitted with a mat which refracts the light, increases its luminosity and enhance their colours.

We guarantee our light decorations to produce an enchanting spectacle of light. We offer a wide selection of products, and guarantee their long lifetimes and high durability. We can provide installation equipment, such as brackets, strapping tensioners, steel straps, and plastic or steel cable ties. Brackets are always provided free of charge for any light decoration. The brackets can remain on the object outside the Christmas season, when decorations are removed. Once secured, they make future mountings a breeze.

We manage the production process from start to finish. Everything begins with an idea, which we turn into a full-fledged design project and further on help our customers' vision become a tangible reality.

All-purpose decorations

As the name suggests, POLAMP's all-purpose decorations have a wide range of applications. They work as well as facade ornaments as they do as freestanding, window, or street light decorations.

Our decorations come in 11 colour patterns (including multicolour and two styles of white). We manufacture over 300 types of all-purpose decorations.

These are primarily illuminated ornaments, made with LED rope or strip light affixed to a metal frame or profile. The largest group is stars, which come in a variety of shapes and sizes – from 50 to 150 cm in diameter. Another is snowflakes, with diameter ranging from 65 to 300 cm. Decorations with diameter exceeding 100 cm feature PVC ornaments (of our production) which fill in the LED-free spaces. We produce over 100 different styles of star and snowflake ornaments.

No Christmas is complete without a Christmas tree, so naturally, they comprise a large fraction of our offer – they are available in many colour schemes and either in traditional or suspended form. We produce several dozen styles of Christmas trees: standard, enhanced with additional motifs (e.g. stars), or halved (for street lights).

LED rosette decorations and bauble ornaments, which are all available in multiple styles, are also popular with our customers. Additional shapes include: angels, bells, moons, gifts and candles.

Another category of all-purpose decorations is characters inspired by fairy tales and Christmas stories, e.g. Santa Claus, reindeers and snowmen. Some are available on mats – lined with additional LEDs, as in our bows and illuminated ribbons.

All-purpose/pole mounted decorations

POLAMP's decorative lighting made with aluminum profiles and LED rope lights can be installed in many ways; most, however, work especially well as pole mounted decorations. We recommend them for decorating historic districts' and areas with traditional-style architecture.

These decorations also fit into the all-purpose product category. Their unique property is that their shape can be adjusted to fit a particular street light's post or its, often spherical, light cover.

Stars, snowflakes or baubles can be symmetrically affixed on both sides of a street light. Falling stars, gifts, or shape compositions are affixed on a single side. Christmas tree silhouettes can be set up adjacent to street lights or be suspended from them.

A starry ribbon or symmetrical ornament may encircle the light cover, putting the lamppost's light source right in the middle of the ornament. Some towns prefer more light-hearted decorations, such as our sitting Santa.

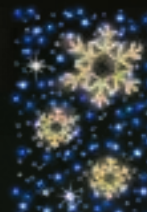

The sight of our decorative lighting adorning the streets of many Polish towns brings us sheer delight. Likewise, they fill the hearts of their inhabitants with joy. We see children excitedly point at the glistening lights and adults, inspired, telling them Christmas tales. And that's what it's all about!

If you seek to bring the Christmas spirit to your town, contact us. We treat every customer like he or she is our favorite. In addition, we grant you a warranty of 24 months.

All-purpose/facade decorations

This category of LED decorations makes use of a light-reflecting mat, which produces impressive lighting effects. It boosts their luminosity and makes their colours more vivid.

They consist of an LED rope light affixed to an aluminum frame with anti-corrosion coating, skillfully welded by our experts. Upon request, we also give the decorations a coat of paint. Finally, the outline is fitted with additional LEDs: either static or blinking (FLASH).

These decorations are shaped like Christmas trees, stars, bows, gifts, angels, baubles and snowmen.

Pole mounted decorations

We have over 100 high-quality products in our pole mounted decorations product family. They bespangle the streets, market squares and plazas of many towns every year.

Stars & snowflakes, available in 11 colour patterns (including multicolour and two styles of white), are a tried and true choice.

The symmetrical decorations are mounted around the lamppost's light cover. Often expanded with meteorite shower or curtain modules, they are a popular choice of decorative street lighting.

The snowman is one of our favorites. One of the variants is mounted on the top part of the street light so that lamp is situated in the center of its belly. Alternate designs include the character climbing up the post or sitting on top of it.

Pole mounted decorations also include traditional stars, snowflakes, waves, angels, gifts, hearts and bows – illuminated with a LED rope light mounted on zinc plated aluminum frame. They can be affixed to the side of the lamp cover, suspended from it, or made to encircle it.

Make sure to also view our selection of wedge, corner and curtain type decorations. They are available in many arrangements and are fitted with static and FLASH LEDs.

Pole mounted/facade decorations

We produce several dozen item types intended for facade and street light decoration. As with many of our other products, they are available in 10 colours, including two types of white and multicolour.

One of the categories is ribbons, either default or ornamented. Second is arrangements of stars and snowflakes featuring a meteorite shower effect which imitates snow falling from the sky. Their animation is controlled with a remote controlled microcontroller. Third category comprises comets, which are colourful designs made with small and large ornaments. LED rope light unifies the individual parts into a whole. LED-free spaces are filled in with PVC ornaments available in red, silver or gold. Next up are stars and snowflakes, featuring an illuminated curtain of FLASH LEDs. There's also panels with stars, ribbons or Christmas trees, in which LEDs fill in decoration's entire surface. In ornamented windows, on the other hand, only the frame is illuminated.

Pole mounted 3D decorations

We have recently expanded our product family with 3D decorations, which, aside from standard features present in our decorations, that is their low power consumption, durability, efficiency, vivid colouration and different styles of illumination, provide an additional sense of depth.

The effect is achieved with specially shaped frame to which the LED rope light is affixed. They take form of illuminated ribbons which entwine the post. Other styles are based on Christmas tree shapes. The decorations are enhanced with PVC ornaments.

The MULTI variety of 3D decorations produces a beautiful spectacle of light. These decorations have a star-shaped cross-section and are assembled from several flat ornaments of the same type.

3D cylinders are ideal for large open spaces, such as squares or broad walkways. They're between 100 and 320cm tall and come in a variety of colours and may be embellished with PVC ornaments.

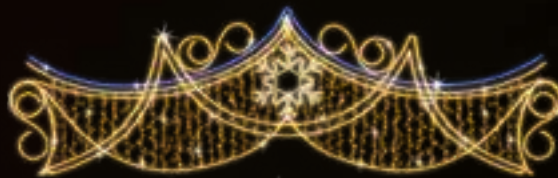

We also produce awe-inspiring 3D chalices, lanterns, crowns, chandeliers and shades.

They are available in 10 colours, including two types of white and multicolour.

Composite over-the-street/facade decorations

This category comprises skyline decor, which is intended for decoration of the overhead space right above the street or on building facades.

The decorations are up to 600 cm wide. Some are simply a motif of LED lights, others feature additional ornamentation, such as PVC baubles. We can arrange a delivery for large shipments; they may be delivered disassembled and we'll assemble and install them on site.

Facade mounted panels are eye-catching facade decorations made with Xmas present and bauble ornaments and LED rope light, similar to star and snowflake variants. These decorations come with or without illuminated backdrop. Semicircles with ornaments are a different style, which works both as an over-the-street and facade decoration.

These light decorations feature all types of LED lighting used in our products, e.g. shimmer or meteor rain, which are especially visually stunning in our LED curtains. Our largest curtain piece measures 150 x 700 cm.

The curtains, which take form of shimmering blanket of LED string lights, provide a stunning and unique spectacle of light which differs from that produced by our standard over-the-street ornaments.

Make sure to look at our signs, available in multiple languages. The most popular variants spell classic Christmas greetings, such as „Merry Christmas“. The largest sign spans 800 cm.

We also recommend our gates, which resemble a drawn curtain. They measure 500 x 600 cm.

We deliver and, if needed, can assist with the assembly, restoration, repair and even out-of-season storage of products you have bought from us. We also give you all the benefits of manufacturer's warranty.

All-purpose 3D decorations

This category comprises a group of over 250 various three-dimensional decorations. They are intended for both posts and facades.

Giants are the most popular sub-category in this collection. They are massive, colourful arrays of LED lights fashioned into shapes of baubles, gifts and stars. They festoon town squares, plazas and walkways and are often situated in front of municipal buildings or malls.

Walk-through 3D decorations are a fantastic choice as well. They give passers-by an opportunity to directly interact with the decoration and are perfect for festive snapshots. Ideal for children, they are bound to awake a playful, childlike spirit of Christmas time in adults as well.

All of the aforementioned light decorations are made with LED lights. Smallest bauble-shaped ornaments have a diameter of 200 cm. Largest - 490 cm. Gifts: for spherical base the diameter ranges from 60 cm to 490 cm; rectangular base - 300 x 200 cm. Stars, depending on type, can either span 300 cm in diameter (spark variant) or measure up to 50 x 200 cm (flat-faced variant).

We also make 3D LED rope light decorations. They consist of two LED planes combined to create an effect of depth. We produce deer, Christmas tree, angel and bear shaped illuminated figures in this category. Their dimensions range from 80 to 200 cm.

We'll be happy to deliver our giants to your chosen location and assist in their installation and maintenance. We give our customers all the benefits of manufacturer's warranty.

3D figures

Our three-dimensional decorations inspired by classic Christmas characters festoon the streets of hundreds of towns.

We produce angels playing musical instruments: trumpet, harp or violin. There's also reindeers, sleds, Santa Claus, igloos and snowmen (either in white or colourful theme).

Our nativity scene decorations produce a magical effect. The basic set can be expanded with additional characters and animals mentioned in the Bible. They're a perfect ornamentation for town's historical districts and look stunning outside of churches and sanctuaries.

Bison, moose or swans aren't restricted to Christmas season and can be displayed all year round.

A distinct type of 3D light decor is produced by merging two planes. Trumpet-playing angels and various animals are available in this style.

These animal- and human-shaped decorations are bound to impress anybody with their wondrous display of light and fantastical appearance.

We don't merely sell our decorations - call us to arrange delivery, installation and maintenance of our decorations. Warranty included.

3D fountains

POLAMP offers over 20 distinct products in this category. These include decorations for existing fountains or standalone fountain-shaped illuminations which are bound to wonderfully embellish any town plaza.

As we all know, traditional fountains are disabled for winter time. Thanks to our decorations, they can shine even in sub-zero temperatures.

One of the more interesting variants is the illuminated fountain topped with a hovering light sphere. The sphere is available in various styles: starry, snowy or moon/planet-like.

Light fountain in star pattern is also an interesting choice. It produces an illusion of ribbons of light flowing from the center of the fountain. These fountains are mounted on an aluminum post.

Fountains featuring a LED meteorite shower effect mimic water pouring into fountain's basin or in jets into the air. Available in styles of circular base or illuminated chalice.

An unusual variant is the tree-shaped fountain. Its branches can even be adorned with additional ornaments, such as baubles. This choice is very popular with our clients.

Lastly, we offer to transform any street light into a fancy-shaped fountain, which is bound to turn heads after night-fall. These decorations are affixed to post's base and don't reach the light cover.

Fountains are available in 10 colours, including multicolour. Largest fountain measures 1000 x 950 m.

We'll be happy to deliver our 3D fountains to your chosen location and assist in their assembly and maintenance. We give our customers all the benefits of manufacturer's warranty.

3D Xmas Trees, regular trees

3D decor is the newest addition to our selection of festive decorative lighting. These state-of-the-art products prove that spectacular light decorations can also be energy efficient.

Tree decorations and Xmas trees are available in 11 colours, including multicolour. They can be found throughout many cities and towns; on plazas, in front of commercial buildings and inside of malls.

3D Xmas trees come in three variants: cone, pyramid and ribbon. They are mounted on an aluminum frame and are feature an illuminated star topper. Smallest tree has dimensions of 200 x 75 cm; largest - 1000 x 400 cm. Available upon request.

Light sphere Xmas tree is a very original alternative to classic trees. Such tree measures 600 x 300 cm. They are as perfect in bringing festive atmosphere to various places as their traditionally shaped cousins. Available upon request.

We give our customers all the benefits of manufacturer's warranty. We deliver and, if needed, can assist with the assembly and maintenance of our Xmas trees and tree decorations.

3D DECORATIONS GIANT CHRISTMAS BALLS

Terra
Christmas

Giant baubles reaching up to 5 metres (4,9 metres) of height are perfect for filling spaces of large squares, parks, and town squares. Their size and diversity of ornaments act as an eye catcher and attract attention of passers-by. These decorations are increasingly chosen by our customers.

These 3D multi-style pole mounted ornaments illustrate how several identical motifs may be combined to form a magnificent three-dimensional street light decoration. The number of individual components can be adjusted as needed. The decoration can be mounted so that it surrounds only street light's light cover or pole.

Not unlike Xmas trees, other light ornaments may be animated. Such ornaments look especially amazing with the meteorite shower effect. A remote controlled microcontroller may be used to manage the display. Such programmable ornaments may be then combined into large arrays and programmed to sequence circuits of lights, therefore producing a stunning spectacle of animated lights. The possibilities are endless!

Large illuminations composed of simple ornaments are perfect decorations for tall lamp posts. The height of these illuminations reaches up to 3 metres, which makes them visible from a long distance. Thanks to a wide range of elements belonging to such categories as for example stars and snowflakes, we can create countless combinations of large illuminations.

Suggested street light decoration mounting placement. Decorations can be mounted in a variety of ways depending on the pole height and light cover shape and type. The possibilities are nearly endless. Some decorations can be mounted symmetrically on opposing sides of the lamppost, or even in threes or more per individual lamppost in order to obtain a three-dimensional effect.

All-purpose decorations are designed for street lights, facades and interior decor. Individual pieces can be combined into larger motifs, i.e. over-the-street or large facade decorations.

Snowflakes and similar smaller all-purpose motifs are available with or without the frame. The latter variant is better suited for hanging from Christmas trees.

Nearly all our decorations may be enhanced with the addition of a mat. Colourful mats refract light and increase the luminosity and colour depth of light ornaments. Motifs listed on this page are merely suggestions.

Many of our suggestions come with PVC ornaments. If you wish, we may embellish any design with such addition. Ornaments are available in following colours: gold, red, blue, silver or white. Additional colours available upon request.

Rosettes are a new addition in our product family. While stars and snowflakes are regarded as typically festive, rosettes may be freely displayed all year round. They look wonderful on circular windows and openings in church facades. They may also be combined into larger motifs (i.e. over-the-street decorations).

Colourful mats refract light and increase the luminosity and colour depth of decorations. Motifs listed on this page are merely suggestions. Nearly all of our decorations may be enhanced with the addition of a mat. However, mats also increase decoration's air resistance, therefore they're not suited for large pole mounted decor, etc. They're safest on facades or as smaller pole mounted decorations.

3D figures composed of LED rope light are examples of a perfect combination of two identical planes into a block - as a result we get a three-dimensional effect in a simple manner. Unlike 3D figures composed of LED lights, LED rope lights are better for bringing out the outline of the block, making the shape more recognisable.

A combination of a few traditional fluorescent or LED lamps in the form of a star. Fluorescent lamps, unlike LED rope lights, emit a stronger beam of light, which is also evenly distributed.

AVAILABLE LED COLOURS

cool white, warm white, yellow, orange, pink, purple, red, blue, water blue, green, multicolor

Our light decorations can be mounted in a variety of ways. Pole mounted and park decorations are most popular. Thanks to patented brackets they are easily and safely mounted and dismantled.

In addition our decorations can be purchased without a frame so that they can adorn a window or a Christmas tree.

3D pole mounted decorations are growing in popularity. Made of a minimum of two elements, they entwine the street light's post or light cover.

We also produce over-the-street and facade decorations. As of yet, module decorations are the largest light decorations in our offer. They often adorn central islands in roundabouts. Large 3D decorations are affixed directly to the pavement.

Decoration types – place and manner of installation.

hanging decoration

pole mounted decoration

park decoration

pole mounted 3D decoration

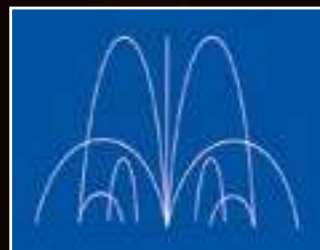

over-the-street decoration

facade decoration

3D module decoration

3D decoration

Types of standing 3D decorations

Giant figures, baubles, presents, stars, snowflakes, spheres, balloons, cottages...

Giant characters: angels, queens, snowmen, Santa Claus, teddy bears, reindeers, other animals...

Giant vehicles with seats: sleighs, carriages, cars, buses, tanks...

Christmas trees, trees, shrubs, flowers

Objects with sponsons to be placed on the water: boats, sleighs, swans, sailers...

Giant figures with passage: presents, baubles, stars, snowflakes...

Imitations of architectonic elements: columns, copings

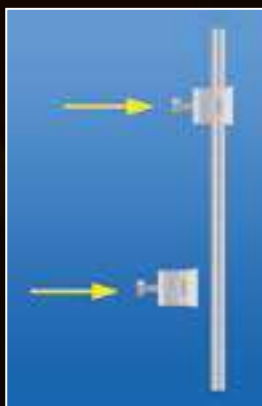

Gates, standing or suspended tunnels

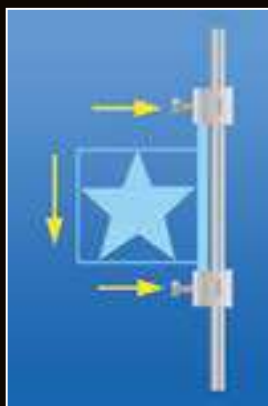

Montaż

- install upper bracket
- install lower bracket (add ~5 cm)

- slide the frame into upper bracket

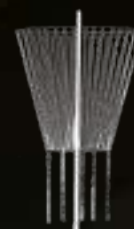

- lower the frame and slide into lower bracket
- hand-screw the knobs (do not use a wrench)
- if need be, use tape as spacer to prevent the knob from damaging the aluminum frame

Every decoration comes with a set of brackets, which make their installation easy. The brackets can remain affixed to a pole outside the Christmas season, when decorations are removed. Once secured, they make future mountings a breeze, while also allowing our customers to save money on steel straps and other installation materials.

Upon request, we provide durable bases and fences. Additional supplies may be also purchased from us, such as: installation tools, steel straps, steel wire rope, wire rope clamps, grips, plastic junction boxes, steel cable ties, plastic cable ties, buckles, hooks, anchors, turnbuckles, carabiners, steel chains and wall-mounted mounting brackets (available w/ outlet and/or dusk to dawn sensor).

Example of frame assembly for 3D pole mounted decoration.

An example manner of installing 2D decoration on a lamp post.

An example manner of installing 3D decoration on a lamp post.

Installation accessories

decoration bracket

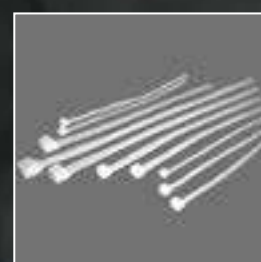

strapping tensioner

steel strap

steel cable ties

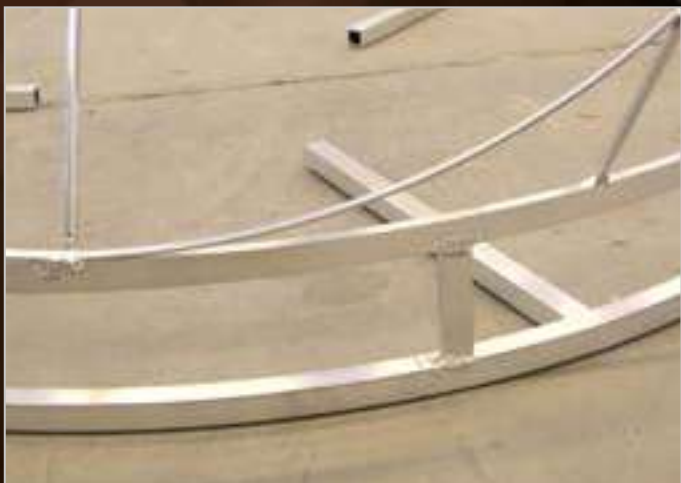

plastic cable ties

The fundamental aspect of our products is their durability. Perhaps not so easily noted, it ensures their safe usage.

TIG technology

TIG (Tungsten Inert Gas) welding uses tungsten electrode protected by inert shielding gas (argon, helium or a mixture of the two). Alternating current unit allows TIG welding to produce welds of much higher quality than traditional welds.

Painting

Upon request we give the aluminum frame a coat of paint.

Components of light decorations

Basic components are LED rope lights, LED lights and mats. Additional components include flashing LED rope lights, LED strip lights, programmable LED lights, flashing LED lights, LED meteorite shower lights, LED curtains, programmable LED curtains, flashing LED curtains, bulbs (also /w flash), PVC baubles and star ornaments, garlands and bows.

LED rope light available in 9 basic colours, either single or doubled

LED lights, LED curtains available in 8 basic colours

mats various colours available

Rope light thickness

Doubled rope light increases decoration's luminosity

Remote controlled for convenience

Microcontroller - light effects

Microcontrollers sequence circuits of lights, which makes the decoration appear to be in motion. They can be programmed to produce a wide array of lighting effects or even complex sequences in single- or multiple-microcontroller operated systems. We sell remote controlled microcontrollers both for single decorations and for decorative lighting systems. For especially expansive decorative lighting systems we've prepared microcontrollers with radio communication modules with Zigbee specification. The wireless connection makes creation of joint illumination systems easy.

Every piece of decorative lighting is thoroughly examined: after trial assembly it undergoes durability and functionality tests. LEDs are inspected and we make sure if the decoration had been produced in accordance with the project.

3D LED decorations in the form of sitting Santa Claus with 2 presents – POL-0973M, 200 cm width, 170 cm height.

The decoration is based on aluminium chassis. 25/25/2 aluminium moulding and round aluminium rod, min. 8 (mm? cm?) diameter. The weight of the chassis itself is minimum 25 kg.

See the catalogue for the available colours of the light. The structure and the outlines are covered with LED rope lights, min. 13 mm diameter, min. 36 vertically placed LEDs per running metre.

The figure is filled with LED lights, whose density is 100 LEDs per 10 m. They have the form of type H03RN-F wire with the minimum gauge of 1x0,5 mm. The total amount of LEDs is minimum 1500.

The ornament is filled with metallised mat, 5x5 cm mesh in available colours from the catalogue. Everything is connected with quick release plates, as well as IP44 sockets and plugs. The decoration is equipped with type N8 IP54 switchboard. Standalone structure with deadweight supports*.

3D LED decoration in the form of a large nativity scene – POL-1951, 400 cm width, 250 cm height. It includes the construction and the figures of Jesus, Mary, Joseph, the Magi, sheep.

The ornament is based on aluminium chassis. The nativity scene is made of 40/20/2 aluminium moulding, while the figures are made of round rod, minimum 8 (mm? cm?) diameter. The weight of the chassis itself is minimum 50 kg.

The interior of the nativity scene is lit with cool white, while figures are lit by warm white LEDs. The structure of the nativity scene is covered with min. 13 mm diameter LED rope lights (min. 36 vertical LEDs per running metre). The figures are filled with warm white lights (100 LEDs per 10 m). 1x0,5 mm type H03RN-F wires. The figures' heads and hands are accentuated with min. 13 mm diameter LED rope lights (min. 36 cool white LEDs per running metre). The total amount of LEDs is minimum 7000.

Everything is connected with quick release plates, as well as IP44 sockets and plugs. The decoration is equipped with type N8 IP54 switchboard. Standalone structure with deadweight supports*.

POL-1204 3D decoration – 250x100 cm cone – cool white snowflake, cone's inner parts in blue colour. LED ornament to be placed on a lantern – 250x100 cm with connecting wires and installation elements. The decoration is based on aluminium chassis in the shape of cone, welded using the TIG method from 20/20/2 and 20/10/2 rectangular moulding.

The frame is to be installed on special lantern clamps. The whole decoration's surface contains min. 650 LEDs. The ornament is composed of min. 1 set of LED lights (100 LEDs, 1x0,5 mm type H03RN-F wire). The snowflake is based on a structure which is covered with LED rope lights (min. 13 mm diameter and 36 LEDs per 1 m, CE and manufacturer's markings every 1 m). The rope lights are attached to the structure with 160/2,5 mm polyamide ties every 2-3 LEDs. Min. 2x0,7 mm type H05RN-F power cord, everything is connected with type "POL" IP44 quick release plates. The rated power is approximately 67 W. Special lantern clamps.

The clamps are made on an eccentric press (without the use of a welding machine) from 2mm grade 5235 sheet metal. The clamps are galvanised and have 2 20mm holes for 19mm steel strip and a hole for 8mm screw for attachment to a post.

POL-0713 3D decoration – cylinder with a crown ornament on the top – 120/80 cm – blue, yellow crown.

120x80 cm 3D LED ornament to be placed on a lantern with connecting wires and installation elements.

The decoration is based on aluminium chassis in the shape of circle, welded using the TIG method from min. 20/10/2 rectangular moulding .

3 fixing clamps are made of min. 20/20/2 and 15/15/1,5 aluminium moulding. They can be adjusted to fit the thickness of a given lamp post. The clamps are from 2mm aluminium sheet in the shape of min. 12cm/8cm hexagon cut in half. The ornament can have minimum two wheels with fixing clamps.

The whole decoration contains min. 450 LEDs. It can be composed of LED curtain with min. 1x0,5mm type H05RN-F power cords. Everything is connected with type "POL" IP44 quick release plates.

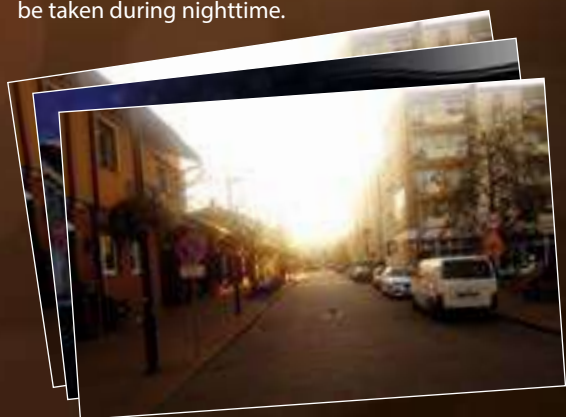

AVAILABLE LED COLOURS

cool white, warm white, yellow, orange, pink, purple, red, blue, water blue, green, multicolor

LIGHT DECORATIONS VISUALISATION

The submission of photographs depicting area to be decorated.
The photographs do not have to be taken during nighttime.

DECORATIVE LIGHTING

If the submitted photographs were taken during daytime, we perform a simulation of nighttime.

The selected decoration is placed in the photograph.

The final visualisation of the area.
Thanks to the visualisation we can see what the area looks like with the selected decorations, or make possible changes.

POL-0916 - decoration's model number

200x600cm - decoration's dimensions (hgt. x wd.)

510W/LED102W - Power (W) incandescent rope light/LED rope light

Every decoration listed in this chapter comes in one of 10 colour styles: cool white, warm white, yellow, orange (rope light only), pink, purple, red, blue, WATER BLUE, green and multicolour. If RGB lights are used, the decoration can shine in any selected colour. Light colour in individual models can be changed upon request.

Grodzisk Mazowiecki

Christmas trees

GARLANDS, ORNAMENTS

Decorated GIANT cones up to 112 m of height (usually up to 14 m), GIANT cone with RGB modules, small Christmas trees, decorated Christmas trees, wreaths, garlands, baubles, stars, artificial snow, decorations with garland, animated figures.

GIANT cones up to 14 m of height (they can be taller on the customer's request)

Small Christmas trees, garlands, wreaths, baubles, stars, artificial snow, decorations with garland, animated figures.

Giant Christmas trees

The production of Christmas trees by POLAMP dates back to 2009, when the production of mats and conifer needles began. They are the highest quality solutions, weather and UV resistant, but most importantly, they are safe and made from non-flammable materials.

We have construction projects, as well as all the necessary static and durability calculations. Thanks to its structure with ballast elements, a Christmas tree can be installed in the open space and set on levelled and hardened ground, like plaza, market square, etc.

Thanks to the modular structure, the height of a giant POLAMP Christmas tree can reach up to 112 m. Its steel structure is durable and can be disassembled to make the transport easier. The product can have the shape of a cone or a pyramid. The former comes in two variants – elegant or natural (with longer PVC conifer needles). The basic colour of needles is green, and the type – spruce. Similar to its height, type and colour of a Christmas tree are at customer's choice. We can prepare spruce, fir or larch conifer needles in colours like blue, red, silver, golden, etc.

Each 2-metre module is a steel structure coated with anticorrosive layer in the process of galvanisation. The elements can be put one into another, which makes them more convenient to store in the off-season. It is possible to access the inner part of the Christmas tree through a low-profile door in order to install illuminations and do the maintenance.

In our offer we have foundations, platforms, and railings. On customer's request we can put a logo of company or locality.

ATTENTION: Cones' dimensions provided in a further part of the catalogue do not include the tip in the form of a star. Depending on the cone's height, additional 0,5 m to 1,5 m should be added to the height..

Traditional Christmas trees

We have been producing Christmas trees since 2009. They are made from high-quality non-flammable materials which are weather-proof.

The majority of artificial Christmas trees has 200 or 210 cm of height. They have supports so that they are stable, while branches are densely-distributed, which makes the Christmas tree seem like a natural spruce. Green is the most popular colour for the trees we sell.

PVC ornaments

We have been producing Christmas trees since 2009. They are made from high-quality non-flammable materials which are weather-proof.

The majority of artificial Christmas trees has 200 or 210 cm of height. They have supports so that they are stable, while branches are densely-distributed, which makes the Christmas tree seem like a natural spruce. Green is the most popular colour for the trees we sell.

Decorated Christmas trees, GIANT cones

We offer decorated POLAMP Christmas trees which are ready to set up. Our suggested solutions include sets of structures, lights and ornaments in various configurations and colours.

We have cones which consist of the following types of decorations:

- spruce garland + tip + LED string lights
- spruce garland + tip + LED string lights + meteor shower rain lights
- spruce garland + tip + LED string lights + LED rope light
- spruce garland + tip + LED string lights + LED rope light + mat
- spruce garland + tip + LED string lights + LED rope light + PVC ornaments

- spruce garland + tip + LED string lights + LED rope light + meteor shower rain lights
- spruce garland + tip + LED string lights + LED rope light + meteor shower rain lights + mat
- spruce garland + tip + LED string lights + PVC ornaments
- spruce garland + tip + LED string lights + PVC ornaments + meteor shower rain lights
- spruce garland + tip + LED string lights + LED rope light + meteor shower rain lights + PVC ornam.

It is worth to distinguish GIANT cone with RGB modules. It is animated, remotely controlled, and available in various colours. The modules are joined together so that they form chains which when put together form planes. Thanks to the animation, the planes provide spectacular and incomparable light effects.

The height can be adjusted to the needs. The smallest Christmas tree reaches 100 cm of height, whereas the tallest 1400 cm. The following heights are also available: 150, 200, 250, 300, 400, 500, 600, 700, 800, 1000, and 1200 cm.

Christmas trees are symbols of the contemporary times. In the case of these products, the light is the most important, as well as its colour and the way it glows. From the technical point of view, we offer very durable Christmas trees, efficient in terms of lighting, and easy to assemble. Although in the case of maintenance, repair, and installation of a selected model we will be pleased to deliver all the elements and help to create the planned illumination.

Traditional decorated Christmas trees

Traditional Christmas trees made of artificial conifer needles. We offer them in two variants – yet to be decorated by the customer or already decorated.

POLAMP's idea for decoration is to pick the majority of ornaments, if not all of them, in one colour. We offer the example compositions: silver + white, silver + golden, red + golden elements, silver + red and blue baubles.

Christmas trees reaching 225 cm of height have 180 baubles. We also offer Christmas trees of the same height but a little wider, which can have 200 various ornaments. Similar products, such as wreaths or decorated garlands, are offered in the same sets as Christmas trees.

Christmas tree sets do not include LED string lights. We offer a huge range of lights, so the decision is up to the customer.

Garlands

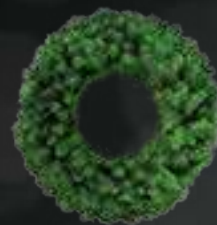

POLAMP garlands are high-quality products, inspired by the nature. We produce them from artificial conifer needles which are resistant to difficult winter atmospheric conditions. In the form of wreaths they serve as door decorations or as arches hung over promenades.

Our products can be ordered with or without ornaments, i.e. LED string lights or small light decorations such as bells or stars. Decorated garlands are mounted on star-shaped profiles and they are additionally decorated with LED lights, so that we get an original decoration to hang, for example on a window.

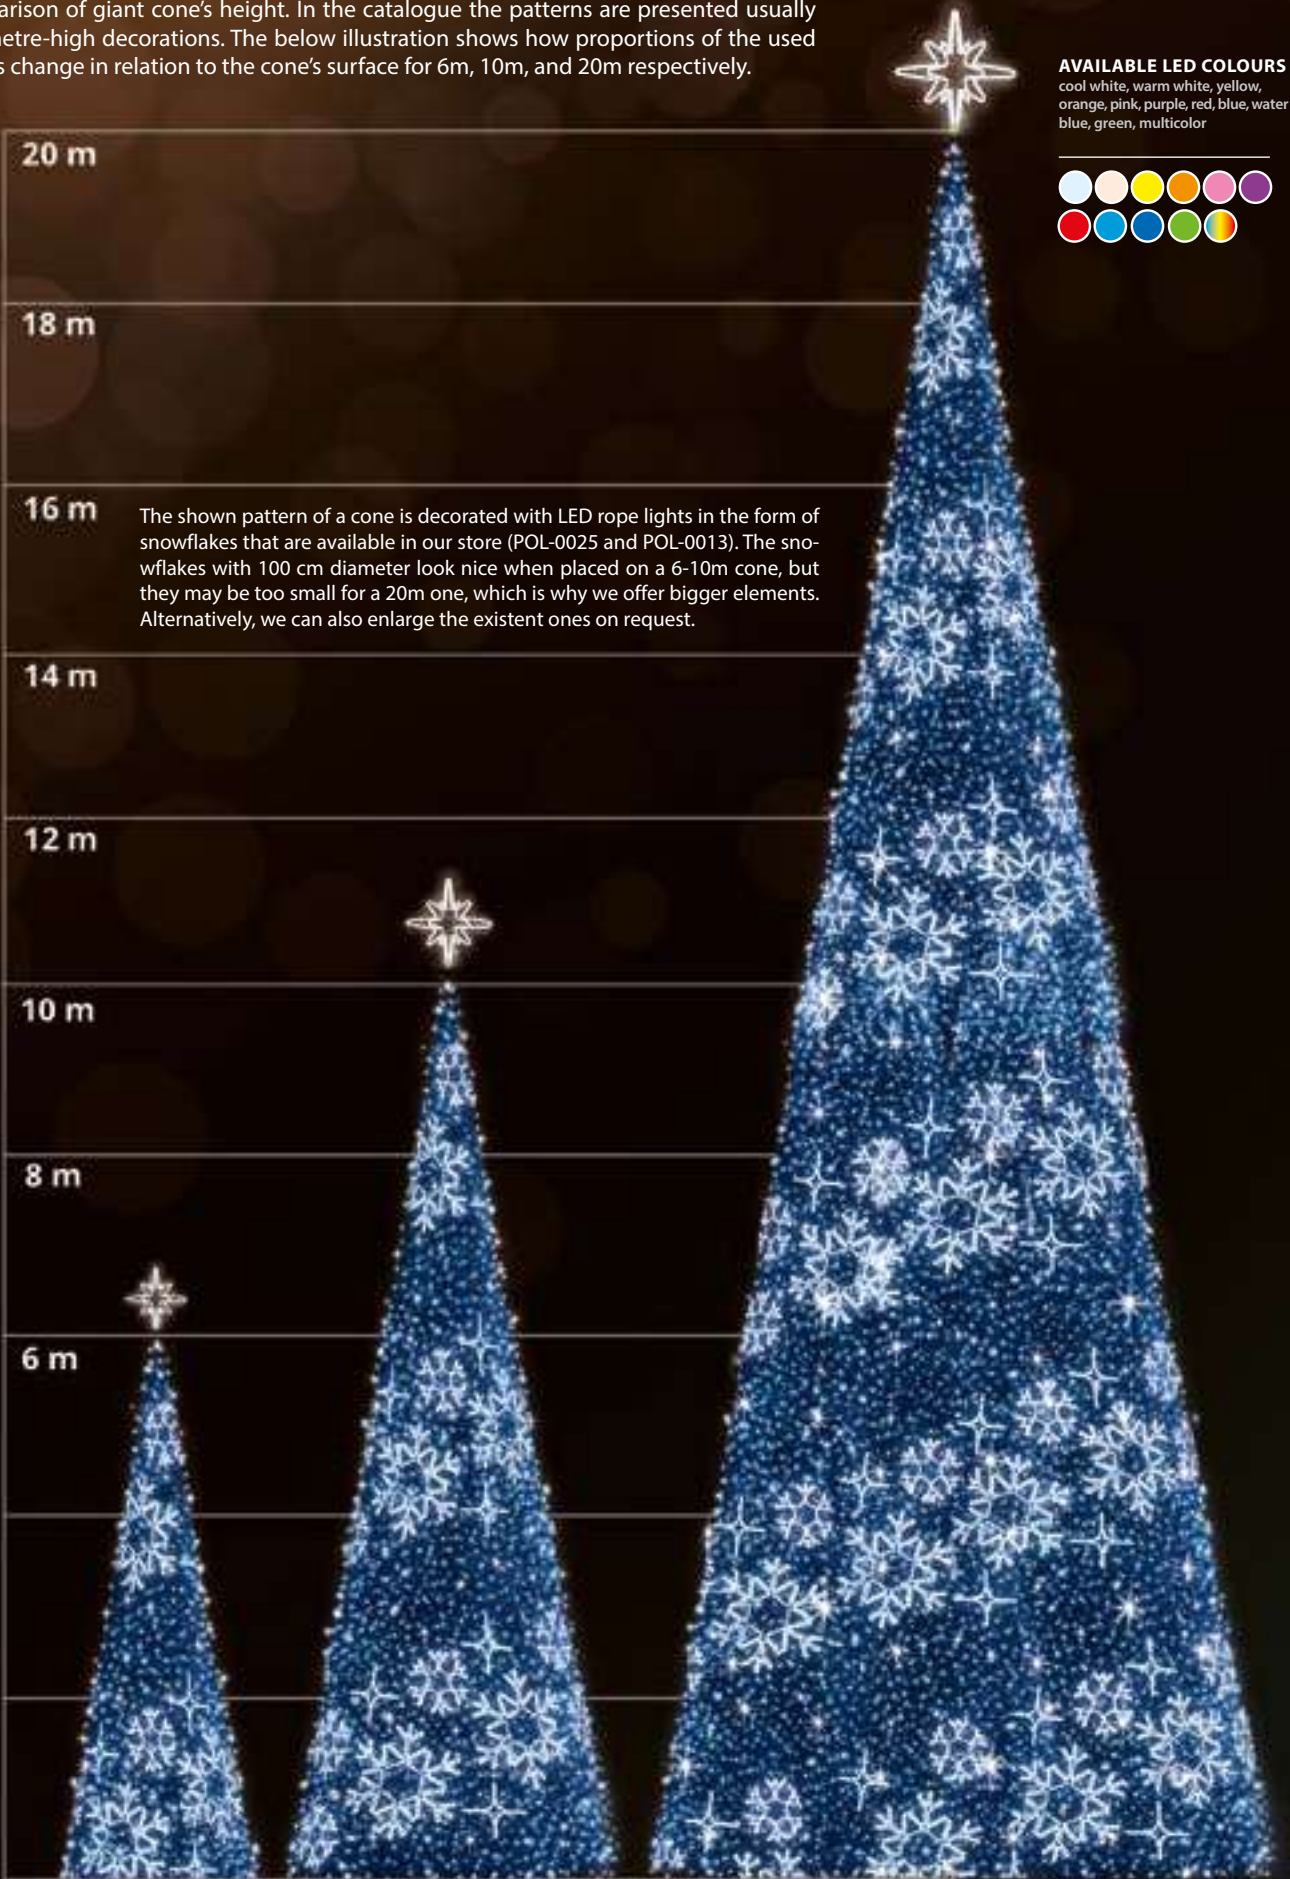

Straight garlands have 22 cm of diameter and 270 cm of length. The ornament in the shape of a candy is a little shorter – 90 x 20 cm.

The said wreaths, being in our offer, are sold with or without ornaments. They can be an element of a chandelier that is hung on a ribbon.

A novel idea on the Polish market is a portrait which has a garland instead of a standard frame. We offer portraits of Santa Claus, reindeer, and snowman.

The comparison of giant cone's height. In the catalogue the patterns are presented usually for 8-10-metre-high decorations. The below illustration shows how proportions of the used ornaments change in relation to the cone's surface for 6m, 10m, and 20m respectively.

DECORATED CHRISTMAS TREES

GIANT CONES

Because of its price, the easiest and the most popular ornament is a cone decorated with LED lights only. It can also serve as a base for other patterns of surface, covered with LED rope lights and PVC ornaments. Straight cones can differ in terms of the number of LEDs. ST02 has twice as many LEDs as ST01, whereas ST03 twice as much as ST02.

New in our offer. The cone is covered with green garland with LED lights in stripes every 1m, interspersed with transparent surface of the same height, filled only with LED rope lights. As a result, the cone appears to be lighter, while the structure's transparency contributes to the play of light between the cone and the street lighting.

MODULAR STRUCTURE

Cones are available in heights: 20, 30, 50 ... to 112 m. Dimensions listed in centimeters, weight in kilograms. Listed weight does not include weight of decorations.

Listed cone heights do not include the LED rope light topper. Add: 50 cm for cones to 6m, 100cm for cones to 10m, 150cm for cones to 14m. I.e. 12m cone (1200cm in table) will have total height of 13,5m.

Each 2-metre module of a cone is a steel structure coated with anticorrosive layer in the process of galvanisation. The elements can be put one into another, which makes them more convenient to store in the off-season. It is possible to access the inner part of the Christmas tree through a low-profile door in order to install illuminations and do the maintenance.

Meteor shower rain LED lights

Meteor shower rain lights are to an extent similar to (LED) curtains. They are used as outside illuminations.

LEDs are hung on a string and resemble meteor shower rain. Subtle but effective cool white light.

Strings with LEDs can have 20 or 50 cm, having 240 LEDs, or 100 cm with 640 sources of light. Since they are used to decorate building elevations, windows or roofs they are splash-proof. These high-quality products have very long lifespan (100000h), great damage resistance, and UV resistance. 230V power supply, 7.9, 9.6W power.

Sets of meteor shower rain LED lights can be joined together up to 10 sets. They can be connected with a patented connecting piece.

The falling light effect attracts attention of passers-by.

Christmas trees with LED RGB modules and control panel are a perfect product for those who are looking for something more sophisticated than static light decor. The controllable colour and flow of light which they offer, amazingly livens up any display. The microcontroller equipped trees can produce a wide array of lighting effects or even complex animated light sequences in single- or multiple-microcontroller operated systems. We sell both remote controlled microcontrollers for single decorations and decorative lighting systems.

Cone with passage

height	diam.	weight
600	200	223
700	230	295
800	265	336

MODULAR STRUCTURE

The listed heights do not include a LED rope light tree topper. 50 cm and 100 cm have to be added to the given height of cones up to 6 m and 8 m respectively.

Walk-through trees are a new product in our offer. Thanks to the tunnel leading through the their base, they aren't restricted to areas free from pedestrian traffic and may be situated on sidewalks and walkways. For aesthetic purposes, tunnels are available in trees of at least 6 meters high or taller. Standard models are listed below.

AVAILABLE LED COLOURS

cool white, warm white, yellow, orange, pink, purple, red, blue, water blue, green, multicolor

ELEGANT cone

NATURAL cone

LUX pyramid

POLAMP LLC has been producing conifer needles and Christmas mats since 2009. The components used in the process of production are of the highest quality. They are characterised by their resistance to UV radiation. All our decorations made from conifer needles not easily ignitable. We produce Christmas trees, garlands, wreaths, spheres, and tinsel from our conifer needles. Years of observations and experience have led to professional, safe, and convenient solutions.

Giant Christmas trees

Unlike standard Christmas trees they can reach up to 112 m of height. It is possible thanks to a modular construction which is durable and easy to transport. Christmas trees of this type are used in the case of large city areas, sport and entertainment halls, shopping centres, and city centres.

The basic models of giant Christmas trees are cones and pyramids. We produce them from steel profiles and then we coat them with an anticorrosive layer. Later on the structure is covered with green, white or red PVC conifer needles. Giant Christmas trees are composed of 2-metre segments which are put one on another. The foundation is designed to fit on a standard pallet. For the time of storage or transport the elements can be put one into another. For the purposes of maintenance or installation of lighting, the cone is equipped with an "invisible" door covered with conifer needles, through which the interior of the cone can be accessed.

MIG/MAG welding technology

The structures of Christmas trees and fountains are welded with the use of MIG/MAG technology (Metal Inert Gas / Metal Active Gas) – welding with a fusible electrode in an inert gas atmosphere (MIG, method 131) or in an active gas atmosphere (MAG, method 145). Inert gases such as argon and helium are used in the majority of cases, whereas as for active gases – carbon dioxide or its mixture with argon.

In the case of MIG/MAG method, an electric arc glows between the welded material and the electrode (wire). The arc and liquid metal are protected by a stream of an inert or an active gas. This method is perfect for welding the majority of materials – the thing is to select an adequate electrode wires for different metals.

Galvanisation

The aim of galvanisation is to coat the surface of steel objects with a thin layer of zinc so as to protect it against corrosion caused by air and water. We use hot-dip galvanisation – dipping an object in a zinc bath.

The zinc layer is a few times more resistant to corrosion than steel which was not galvanised. It is because the standard electrode potential of zinc is more electronegative than the potential of iron. Zinc will corrode in the first place and the products of its corrosion will slow down further corrosion. As a result, our structures for cones and decorations can be exposed to negative atmospheric conditions for a few years.

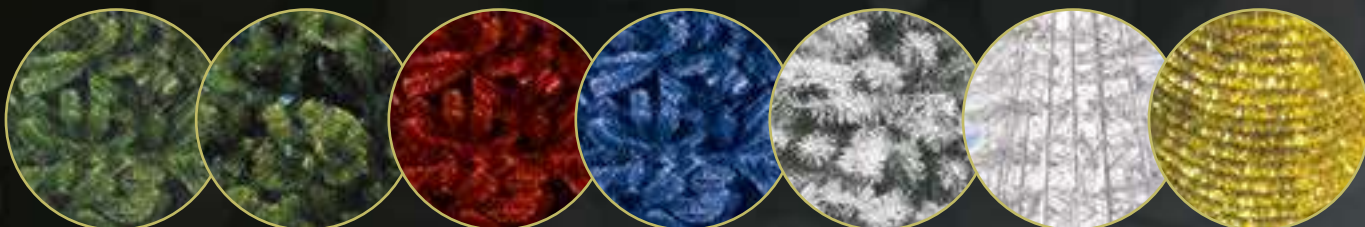

Complement elements

In our offer we have foundations for Christmas trees, platforms, and railings. On customer's request we can put a logo or a name of company, city, sponsor, etc.

Colour and type of conifer needles

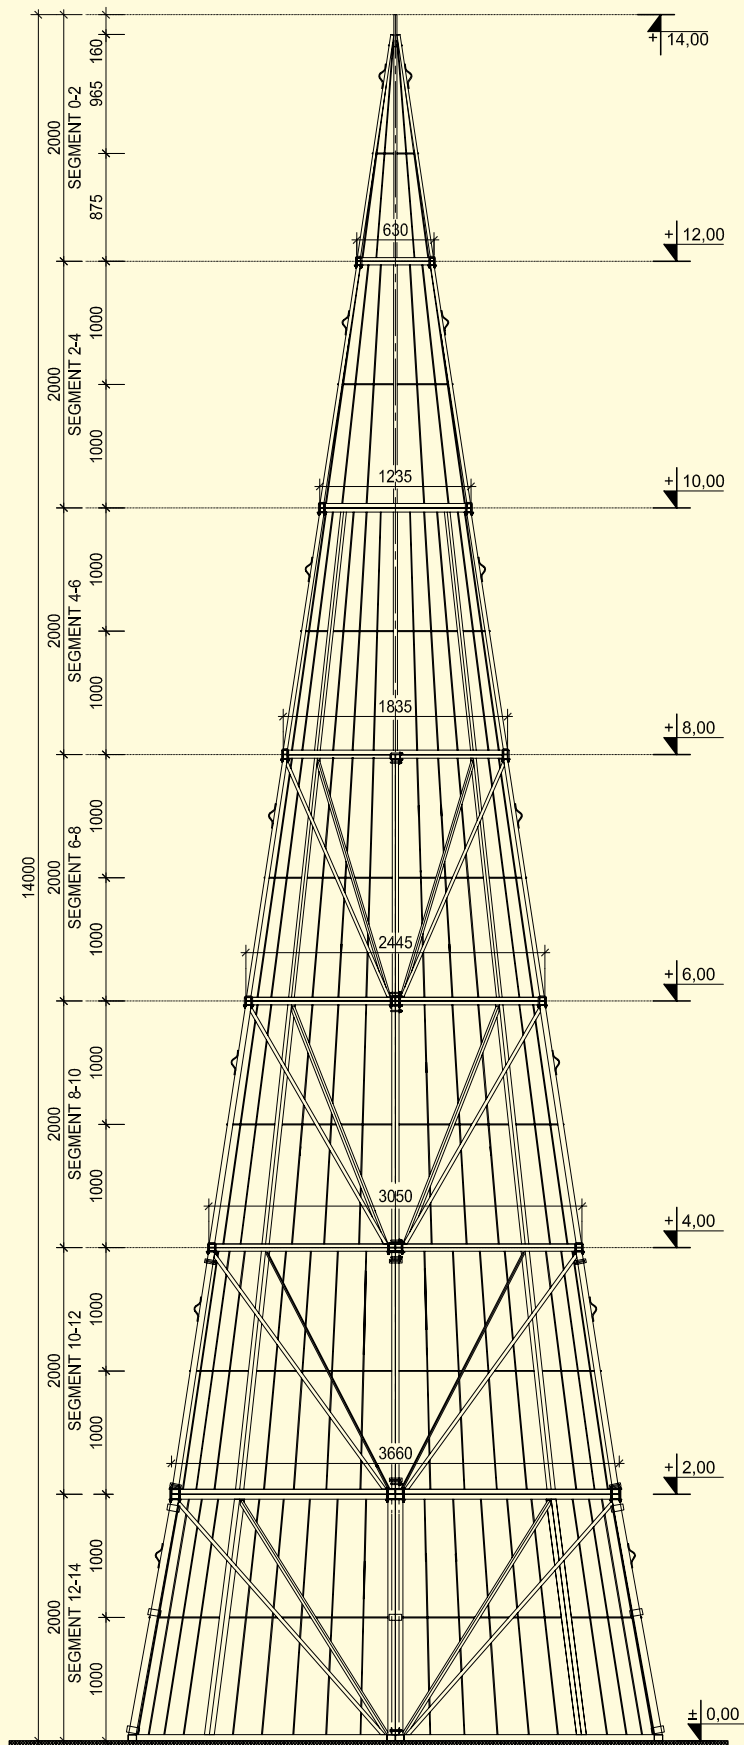

The basic colour is green and the basic type of conifer needles is spruce. On customer's request, i.a., white, silver, and black colours are available. The conifer needles can also resemble pine, fir, and larch.

CONFIGURATION OF A CHRISTMAS TREE CONSTRUCTION OF THE CONE

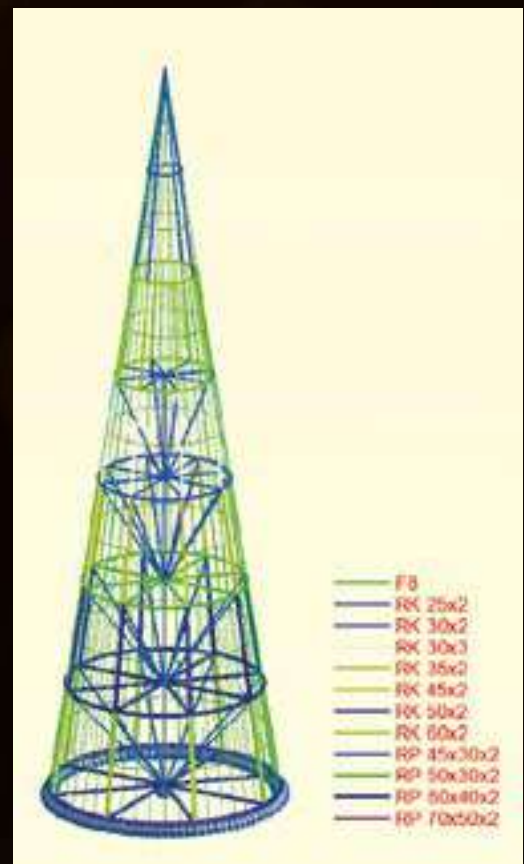

CHRISTMAS TREES

An exemplary scheme of a giant 14-metre Christmas tree

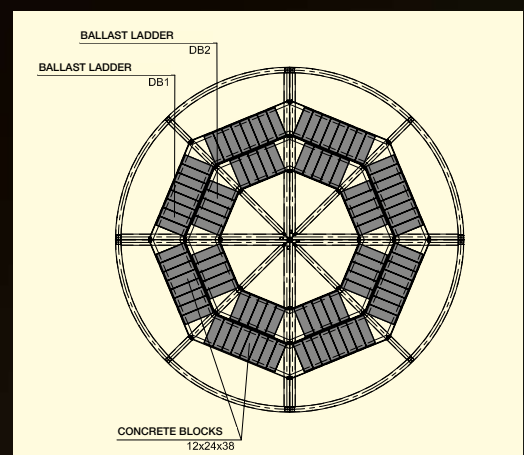

Static and durability calculations.

The scheme shows the structure of a 14-metre steel Christmas tree. It was treated as a spatial steel structure and all welded bonds were treated as stiff. The calculations were made with Robot Structural Analysis 2010 software. Spatial model of the structure is depicted in the pictures below. Dead weight of structural elements was calculated automatically. The same wind load (in accordance with PN-77/B-02011 Az1) as in the case of a cylindrical structure because of a tight coating with conifer needles.

CONFIGURATION OF A CHRISTMAS TREE LIGHT AND PVC DECORATIONS

CHRISTMAS TREES

We also offer complete and decorated Christmas trees in different size – small ones to set in an office or in a house, as well as giant ones to set outside. We use a variety of ornaments from our offer to decorate Christmas trees. These ornaments are predominately LED lights, LED rope lights, meteor shower rain lights, as well as PVC ornaments like baubles in different size, stars, figures, etc. With a controller it is possible to make a static decoration seem more vivid thanks to different modes of operation. Various combinations of the said elements make it possible to create an infinite number of compositions.

Below we present an exemplary Christmas tree and a description of the elements it is composed of.

LED rope lights

An important element of light decoration. Thanks to the fact that LED lights are put inside a special rope we get the effect of solid lines of light. The rope light is perfect for forming different shapes. We use stars and snowflakes composed

of rope lights which we also use in the form of stripes. Just like lights, they can be controlled with a controller and they come in 9 different colours.

Controller

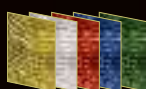

Controllers are perfect for making the decoration seem more vivid by controlling the flow of light in lights, meteor shower rain lights, and rope lights. Controllers provide a great variety of effects and the possibility

to create own modes in a system with one or more controllers. In our offer we have controllers for single Christmas trees, as well as the whole systems of lighting with remote control.

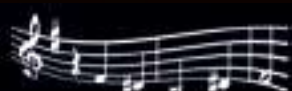

PVC ornaments

Baubles in various sizes, colours and with different layers are basic decorative elements. They are usually made from plastics, which makes them durable and damage resistant. We also offer decorations such as bows, and figures.

Colourful mats

Colourful mats intensify the brightness of a decoration and bring out its colour by reflecting the light.

Music

What is new in our offer is the possibility to add popular Christmas melodies to be played by the Christmas tree.

LED modules

Strobe light

Coloured LED light bulbs

Tip of a Christmas tree

It is predominately a light decoration in the form of a star or a spatial snowflake. It can also be a light rope itself or a combination of light rope and lights.

Christmas tree-cone, garland – spruce.

It is a basic element of a Christmas tree, which is attached directly to the metal structure in the shape of a cone. Other colours of the garland can be used, e.g. red or white, as well as different shapes of the structure, for instance, a pyramid. Cones with additional branches that make the Christmas tree seem more natural are new in our offer.

LED string lights

A basic element of light decoration. They come in 10 different colours: cool white, warm white, yellow, red, pink, purple, blue, water blue, green, and multi colour (3 colours in one set). The

lights can be used in low temperatures and when humidity is high. Thanks to the use of LEDs the lights are characterised by scant emission of heat. The strings have a patented connecting piece at the end, which allows the connection of up to 10 sets powered by one cord. LED lights can be controlled in terms of the flow of light with controllers which we have in our offer.

Flash LEDs

LEDs with FLASH effect complement standard lights and thanks to the flashing effect they attract attention. They come in 7

different colours.

RGB LED string lights

Unlike standard variant, LED lights have plastic encasement. They come in RGB colour – it is a LED which is capable of glowing with three primary colours (red, green, blue), thus capable of glowing with any colour thanks to the possibility to combine these colours. A controller and a remote control included.

– it is a LED which is capable of glowing with three primary colours (red, green, blue), thus capable of glowing with any colour thanks to the possibility to combine these colours. A controller and a remote control included.

Meteor shower rain lights

In the case of meteor shower rain lights we can observe the falling light effect, which is a stunning view. They come in cool white colour and have a wide beam angle thanks to the high quality of LEDs..

Phases of decoration of a Christmas tree

1
Welding of the cone's structure and coating with anticorrosive. Attachment of spruce conifer needles to the cone's structure.

2
Attachment of LED, flash LED, RGB or ball lights. Optimal number of lights in proportion to the height of a Christmas tree is shown in the table on page 56.

3
Attachment of illuminations in the form of white (or in other colour) snowflakes composed of LED rope light or its standard variant.

4
Attachment of PVC ornaments, baubles, tip in the form of a spatial star composed of LED rope light.

Rope light decorations

These are predominately stars and snowflakes. See pages 108-109. Arranged appropriately, they can also be used to decorate the tip of a Christmas tree. We usually use POL-0001 or POL-0002 ornaments for this purpose. The tip can also be decorated with other ornaments.

CONFIGURATION OF A CHRISTMAS TREE

Types of lights

There are 11 basic colours of lights, which are often LED lights. We offer standard LED lights, ball lights, and RGB lights in the case of which each LED can glow with any RGB colour.

CONFIGURATION OF A CHRISTMAS TREE

TYPES OF PVC ORNAMENTS

BAUBLES ON A STRING

10 m string, baubles – 8 cm, golden, silver, red

SINGLE BAUBLES

Single baubles: white, silver, golden, red, blue – from 100 to 300 mm of diameter

STARS 14 x 15 cm; 19 x 20 cm, silver, golden, red

PVC BOWS

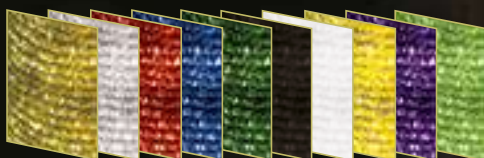

Custom colours, shape, and dimensions

POLYSTYRENE FOAM SNOWFLAKES 110 cm

Metallised mats

POL-FOLSTAR1M PET optical film

Stars effect, the film is available in the form of a reel (20 m x 1 m) or single A4 sheets. The film diffuses LED light reflection across the surface.

A basic type of PVC ornaments in our offer is bauble. We offer silver, golden, red, white, and blue baubles in different size – from 100 to 300 mm. The baubles, just like other PVC ornaments, are weather-proof and can withstand mechanical damage. 8 cm golden, silver, and red baubles on a 10 m string are new in our offer.

All cones, regardless of their size, are composed of one or a few segments. It facilitates the assembly, the disassembly, and the transport. We put effort to make sure that the ornaments are arranged in a natural way and that the whole resembles one element after assembly.

Before the cone is shipped, each segment's functionality is checked – the lighting and the way segments fit together.

The majority of our cones is fully-assembled in a factory. We put complete decorations on each segment (lights, baubles, rope lights) so as to save time and make the final installation faster. During the transport the cone is again disassembled into segments. As a result, all the disassembled segments require the same space as the biggest one.

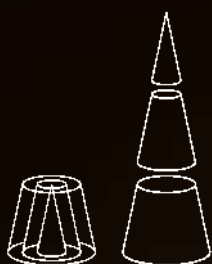

After the segments are assembled in the right order and the lighting cords are connected, the cone is ready.

In the evening and during the night the cone's beautiful illumination can be admired. All its elements are weather-proof.

The time required to assemble or disassemble the whole cone is reduced thanks to the segmental structure and the installation of lighting and PVC ornaments in the case of each segment. The cone can be transported in a light commercial vehicle.

Stages of the cone's preparation in the factory and its installation in the target place.

LIGHTING CONTROLLER

WITH REMOTE CONTROL FOR LIGHTS, CURTAINS, AND METEOR LIGHTS

Terra
Christmas

Controllers are an ideal option for people who expect something more than just static light decorations. They are perfect to make the whole decoration seem more vivid thanks to the possibility of controlling the flow of light in the case of lights, curtains, meteor shower rain lights, etc. They provide a great variety of effects and the possibility to create own modes in a system with one or more controllers. We also offer controllers both for single decorations and the whole systems of lighting which can be controlled with a remote control.

We offer devices with built-in radio control modules using Zig-Bee protocol to control illuminations in the case of streets, squares, parks, and buildings.

Table of example modes with a scheme of jumpers setting in the controller.

XMAS MARKETS ORGANIZATION

No time of the year is more suited for a street market with selection of locally made products than Christmas.

Weihnachtsmarkt (from German Weihnacht – Christmas), a traditional Christmas street market held in many towns in Germany, Austria and Switzerland, is becoming more popular outside those countries as well. Weihnachtsmarkt is traditionally held on the streets or squares in town's historic district. Shopping malls now often join in the custom by organizing similar events too. An attractively decorated and illuminated market attracts customers who are looking for unique items and wholesome food of high quality – products which are especially sought-after in Christmas time.

LED TECHNOLOGY

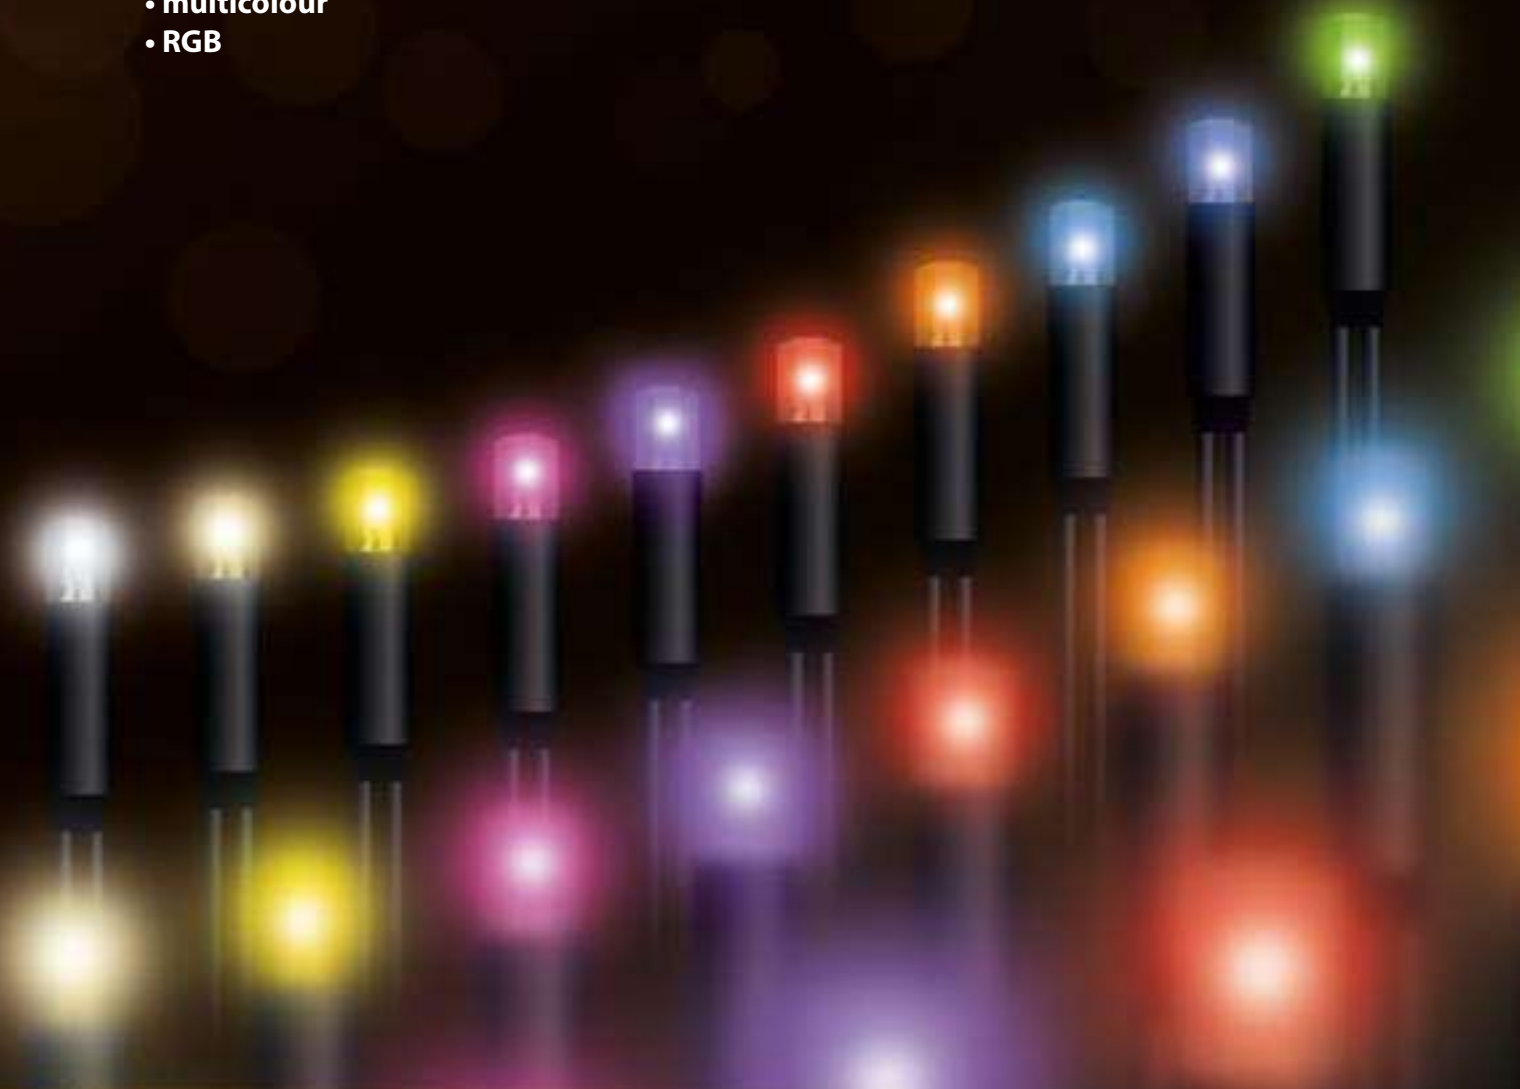

LEDs can be a source of visible and also infra red light. LED is also known as Light Emitting Diode, which illuminates as the electricity flows from anode p to cathode n. The electricity is provided by auxiliary source of energy which is LED power supply unit.

LED lights have a lot of advantages such as small size, long life, low heat emission and power consumption, endurance and brightness of illumination.

POLAMP corporation offers several LED taints:

- **cold white**
- **warm white**
- **yellow**
- **purple**
- **pink**
- **red**
- **orange**
- **blue**
- **water blue**
- **green**
- **multicolour**
- **RGB**

It is a professional method of connecting our illumination products. Hermetic plug guarantees safety in bad weather conditions such as rain, snow, moisture. Furthermore, super – connect system is very easy and convenient to use, which is why it works in a plug and play pattern.

CHRISTMAS ILLUMINATIONS

We have several hundred products in our offer of Christmas illuminations. Every product is based on LED technology.

LEDs are a source of visible light, which use infra red waves. It has a lot of advantages such as small size, long life, reliability and energy saving.

Our offer is divided into 4 groups. Brown series: only for indoor use. LEDs are damage resistant. Suitable for Christmas trees, homes, flats, offices and other indoor decorations. Silver series: Suitable for indoor and outdoor decorations. LEDs are moisture resistant. Plug can be used in earthed sockets. Gold series: Suitable for outdoor use. Cable is isolated with rubber (unlike other series which are isolated with PVC). It has hermetic connections and special system that prevents cable from breaking. Green series: It has the same specification as gold and silver series, but it operates on 24V. This voltage prevents from electric shock and any other damages to people.

Our LED Christmas illuminations are produced in different colours. There are several colours available in our offer. For a special order, we can offer other colour. Standard colours in our offer are white, multicolour and RGB dependently to a certain product. The main purpose of Christmas illuminations is decorating our personal space at night. LEDs can help you save energy during couple of hours every day or night.

In our stock we have LED Christmas lights, small and standard LED curtains, rope lights. Some of the special decorations are plywood light decorations such as Christmas tree, stars and crib. Apart from that, we have meteors, projectors, accessories, etc.

We work hard before each season to expand our offer. If you visit one of our wholesalers or our online shop, you will have wide range of decorations with different size, shape and technical specification.

LED lights

The base of our Christmas offer are LED lights. It is the most common decoration at home and in the office. Christmas trees are also often decorated with lights.

We sell lights in more than 100 variants. All of them are catalogued into our 4 product lines appropriate to its intended use, indoor – brown (230V) and green (24V) outdoor/ indoor – silver, outdoor only – gold

We provided plenty of colour combinations of both light sources and cables. Light angle of all the lights is 360 degrees. The longest cable is 10 meters and is available in all the product lines. In most cases, there is a possibility of connecting together up to 10 cables to one power supply. Quick and easy connection is provided by a special plug. LEDs are placed each 10 centimeters, and have a lifespan of 100000 hours.

Standard LED lights are cables of 6 to 10 meters in length in brown collection. They have from 60 to 1000 LEDs in different colours. There is a choice between one and multicolour. Our LEDs work with no problem in sets up to 10 connected to one power supply. In the silver series we highly recommend 6 meter cable suitable for outdoor use. You can choose a colour from a wide range in our catalogue, or propose your own. We also have RGB lights. In the gold series we offer professional LED lights suitable for outdoor use, in different both cable and LED colours. In the middle there is a special socket that allows you to connect additional 5 meters of cable.

We have a wide variety of products in the LED flash section. In the silver series you can choose 100 LEDs on a 10 meter cable. LEDs flash automatically, you can connect together up to 10 sets of lights. The same specifications you can find in gold series which is typical for outdoor use. The only difference is a special socket that allows you to connect additional 5 meters of cable.

Green series outdoor 24V LED lights also have 100 LEDs on a 10 meter cable. We offer one and multicolour combination. You can connect together up to 10 sets of lights to one power supply.

LED solar panel lights which can illuminate for 10 hours after dark. It charges during the day. There are standard catalogue colours, RGB and custom colours available.

Super dense LED lights - as the name suggests, there are up to 300 white light sources on a 5 meter cable. You can connect up to 5 cables to one power supply.

LED lights with control unit - outdoor use lights with different options of animation, multi and custom colours. Functions: light, strobe, dimm, blink, pulse, sequent, flow, combination.

Ball LED lights - 100 LEDs on a 10 meter PVC cable. We offer one colour and RGB. Another product - professional outdoor lights with 1,5cm in diameter with remote control and any colour combination (RGB)

RGB LED lights are a wide range of products. RGB is often one of the variants in different products. Silver series ball LED lights with 1,5 or 2 cm in diameter are only available in RGB variant. One model has 60 LEDs on a 10 meter cable, second has also 60 LEDs but on a 20 meter cable.

Big Christmas balls have 10 cm in diameter. We have 12 LEDs on a 10 meter cable in the silver series. Available both in white and multicolor. You can connect up to 5 cables on one power supply.

Ornament LED lights- 100 LEDs on a 10 meter cable which form flowers, stars or snowflakes. Suitable for indoor use, available in one or multicolor.

Candle LED lights, which imitate real candles. It is a perfect decoration for someone who enjoys traditional and yet more safe way of christmas decoration. There are 16 flame like LEDs on a 7,5m cable.

Tear LED lights - we provide a couple of colour variants. There are 20 - 30 LEDs on a 2 or 3 meter cables.

Cotton or rattan ball lights - 60 multicolour LEDs on a 6 meter transparent cable, suitable for indoor use.

Control Units

Illumination control unit is a very important device. It is perfect for people who want to set various illumination effects by themselves. We also have our own projects of programmed illumination. There is also a possibility of turning on christmas melodies.

Control units are used in special types of our LEDs such as FLASH, meteors and waterfalls. The light can flash, , dim, strobe, pulse and wave.

Due to control unit, you are able to easily change colour, pace, turning on and off at any time. Control units are compatible with Zig-Bee remote controls. Each model has different functions, which you can change. It can be connected to several hundred meters of rope light.

Usually control units are used in illuminating ells, compositions, squares, etc. It is essential if you want to use it in a big project or if you want to have more effects under control.

Icicle curtains LED

Each year, we can see more and more balconies and terraces decorated with curtains.

We produce several dozens of curtains with a wide range of color combinations. We highly recommend PVC cables. Light angle of all our LEDs is 360 degrees and lifespan of 100000 hours.

Icicle curtains available in silver outdoor series and professional gold series have the length of 2,5 + 2,5m. Overhangs from 5 meter cable have 70 cm of length. There are 120 LEDs which are placed 1 on each 10 cm. Icicle curtains are perfect for roof, ell and window decorations.

LED FLASH curtains have 120 LEDs in which 24 are FLASH LEDs. In silver series, a cable is 5 meters long with one connection in the middle which forms a set of 2,5 + 2,5m.

Professional long LED curtains - Sequence of 4, 6, 10, 6, 4 with 100 cm overhang and 240 LEDs. Sequence of 2, 7, 13, 10, 7, 4 with 258 LEDs and 3 cable connections.

Sets can be lengthened by a special socket from 5 to 10 connected on one power supply. With this set, you can decorate your balcony or window frame. The same type of decoration can be used to decorate ceilings and roofs. The second variant can be used to decorate ells or other bigger spaces.

Our curtains have high damage endurance and is UV proof. Power supply 230V and 3.3W, in case of professional curtains - 13W. There are also 21.6W curtains available. Low power consumption gives you a big opportunity of designing your illumination without worrying about high electricity bill.

LED curtains

Led curtains are one of the energy - saving illumination products made by POLAMP. Suitable for designing christmas illuminations. Unlike smaller curtains, these have equal length LED light cables.

We produce several dozen curtain models. There are several sizes in the **silver series** available : 5x0.5m with 240 LEDs on a PVC cable, 5x1m with 400 LEDs, 2.5x1m with 380 LEDs, 2.5x3m with 600 and 720 LEDs. The biggest set has 2.5x9m with 1000 LEDs.

A little bit different sizes have LED FLASH curtains which can be **standard or professional in gold series**. You can have 5x0.5m with 240 LEDs, 5x1m or 2.5x1.5m with 380 LEDs and 2.5x3m with 560 LEDs. Overhangs can have 6m long curtains with 720 LEDs or 9m long with 1000 LEDs.

We also have **waterfall effect** products in our gold and silver series. In both collections, length and LED amount are the same. For 2.5x3m length we provided 720 LEDs and for 2.5x6m - 1440 LEDs.

Power cables for all the curtains can be joint by a special socket, which can allow you to connect together up to 10 sets. Each LED used in our illuminations has a lifespan of 100000 hours. All the LEDs are also splash-proof.

We recommend to use our curtains to ell, tree, and christmas tree illumination. Waterfall effect LEDs can be also used to illuminate fountains during the winter. Our LEDs are snow, temperature and UV proof. Moreover our LEDs have low heat emission.

We want to wish you a nice illumination design. We also want to inform that we help in project visualization, installation and maintenance.

LED NETS

LED net, as the name suggests, is inspired by a shape of real net. Cables with lights are designed in such a way to form a diamond shaped apertures.

This product is assigned to gold series, which is the highest class of our stock, suitable only for outdoor use. There are 2 variants: standard and FLASH led lights. We can offer a net in the size of 1x2m with 176 LEDs. In the FLASH model you have 32 LEDs. Lifespan of our product is 100000 hours. Power supply is 19,2W and 230V.

High quality and endurance of POLAMP LED net guarantees long years of use. Light angle is 360 degrees. Due to a special socket, you can connect up to 10 sets of lights under one power supply.

We use christmas decoration at this special time of the year, which make us see it different from the standard decorations. We highly recommend you to take up on our offer.

LED meteors

Meteors are a product related to standard and small LED curtains. Dedicated for outdoor illumination.

Similar to curtains, meteors have equal length overhangs (tubes) with LEDs. They illuminate as white meteors falling from the sky. Connection cable is 5m in length.

Cable lengths are: 20cm with 240 LEDs, 50cm with 320 LEDs and 100 cm with 640 LEDs. As a product suitable for ell, roof and window decoration, meteors are durable, UV and splash proof. They have a very high brightness and long life (100000 hours). Voltage is 230V and power supply 2.4, 7.9 and 9.6 W.

You can connect up to 10 sets of lights by a special socket.

There is an option of arranging meteors into a star. Light makes a pulse effect and glamorous illumination.

Rope lights

We produce LED and bulb rope lights in a wide variety of colours. Our stock is one of the biggest in Europe. We offer several dozens of rope lights which are compatible with products made by other companies due to universal connections.

Outdoor bulb rope lights have 36 bulbs each meter. You can easily cut ropes in certain places which are located also each meter. There are LED colours available, you can also order a custom colour. Similar number of lights have **LED one channel rope lights in gold series**. All ropes have 13mm in diameter and are powered directly from a standard socket by a special cable which is also available in our offer. One roll contains 100 meters of rope light. You can cut the rope each 1 or 2 meters. These models are available in different colour variants. All rope lights have LEDs set in a horizontal position. Our products have high quality and flexibility, which makes them perfect for tree decorations, especially when the tree grows through the year. As our other products, life span is 100000 hours.

Our other products are for example **FLASH rope light**, which has automatic function of strobe light in each 6 LEDs. 3-channel rope lights shine with constant or variable light and can be cut each 4 meters. **NEON rope light**, one of the newest products in our offer. It has very high density of LEDs - up to 80 in one meter. The gauge of neon rope light is 12x26mm. It can be cut each 80-120cm.

Rope light gives endless opportunities of creating christmas decorations such as 3D stars which can be placed on top of a christmas tree or snowflakes used as a decoration. Unique example of a decoration can be a LED rope light reindeer sized 70x78x16cm which has 160 very efficient LEDs.

You can also find a wide range of accessories in our offer, which can make your installation or controlling your rope light much easier. Furthermore, we can prepare special sets of rope lights which you can install by yourself, as well as cutting rope lights into different lengths.

Projectors

POLAMP distributes projectors which are a part of picture projection systems. The use of modern technological solutions enables us to produce efficient, reliable, and energy-saving products.

We are able to adjust graphics, pictures, and ornaments to your needs. We offer static and animated pictures. We also have a wide range of accessories – lenses, prisms, fixings, mechanisms of rotation, colour overlays and devices for changing pictures.

POLAMP devices are used by building administrators, and owners of sports halls and shopping centres. Landscape architects ordered our various light designs, which are used in the case of streets, trees, and churches. The most visible and spectacular effects can be seen in the case of building fronts. It is becoming more and more popular on the walls of commune and municipal offices. These designs fascinate with their colours, motifs, and the range of light emitted by the projector. Children may spend hours gazing at moving stars and glowing baubles. Adults also are not unconcerned with such decorations.

Christmas season has a brand-new shape now. POLAMP meets with contemporary needs and aesthetics.

4 PRODUCT LINES (SERIES) BROWN, GREEN, SILVER, GOLD

CHRISTMAS LIGHTING

We offer 4 product lines of christmas illumination:

gold series

- **perfect for outdoor use**
- 3mm thick rubber cable which is perfect in difficult weather conditions
- special system that prevents cable from breaking while the tree is growing
- 7mm LEDs which are damage and splash proof
- super connect technology
- bigger (3 pin) plug which is also a power supply
- FLASH LED option

DECORATIVE use:

- streets, poles, buildings
- trees, shrubs, christmas trees
- balconies, ells, terraces
- yearlong decorations

silver series

- **for both indoor and outdoor use**
- 2mm PVC cable which is slightly thinner than rubber cable, but still waterproof
- 5mm LEDs which are damage and splash proof
- super connect technology
- bigger (3pin) plug which is also a power supply
- 8 function controlling mode option
- FLASH LED option

DECORATIVE use:

- streets, poles, buildings
- trees, shrubs, christmas trees
- indoor christmas trees, garlands
- balconies, ells, terraces
- shop windows
- yearlong decorations

brown series

- **only for indoor use**
- 2mm PVC cable which is slightly thinner than rubber cable
- 3 and 5 mm LEDs which are damage proof
- small (2 pin) plug which is also a power supply
- 8 function controlling mode option
- FLASH LED option

DECORATIVE use:

- indoor christmas trees and garlands
- balconies, ells and terraces
- shop windows
- yearlong decorations

green series

- **for both indoor and outdoor use**
- 2mm PVC cable which is slightly thinner than rubber cable, but still waterproof
- 5mm LEDs which are damage and splash proof
- super connect technology
- 24V power supply required
- 8 function controlling mode option
- FLASH LED option

DECORATIVE use:

- streets, poles, buildings
- trees, shrubs, christmas trees
- indoor christmas trees, garlands
- balconies, ells, terraces
- shop windows
- yearlong decorations

LED christmas illuminations are available in the following colours:

Product names index :

- POL - POLAMP
- LIL, LSL, LCL, etc. - product
- P - professional series
- IN - indoor use
- f - FLASH effect
- c - control unit
- 10M - product length without power supply cable
- 2.5x3.0 - dimension
- WW - warm white, W - cold white, Y - yellow, O - orange, P - pink, PU - purple, R - red, B - blue, WB - water blue, G - green, M - multicolour, RGB - RGB
- second W after dash - white cable, B - black, etc.

Examples:

POL-LSLIN6M-G-B - indoor use green (G) LED string lights (LSL), 6 meter black cable (B)

POL-PLSLf10M-B-Blue - outdoor use professional (P) flash effect blue LED string lights (B), 10 meter blue cable (Blue). „P“ stands for professional but it also means rubber cable (no P means PCV cable)

POL-PLSLbrc10M-RGB-G - outdoor use professional (P) RGB LED string lights, balls with remote control (rc) and 10m green (G) cable. „P“ stands for professional but it also means rubber cable (no P means PCV cable)

POL-OLSLsn10M-W - indoor use ornament (OLSL) white LED string lights (W), snowflakes on a 10 meter cable

POL-PLLILf3,6M-W-W - outdoor use professional (P) flash (f) effect white LED (W) curtains on a 3.6 meter white (W) cable. „P“ stands for professional but it also means rubber cable (no P means PCV cable)

POL-LCL5X0,5-B-T - outdoor use blue (B) LED curtains (LCL) on transparent (T) cable with 5x0.5m dimensions.

Name nomenclature explanation:

POL-LSL6M-G

LSL - silver series lights
LSLIN - brown series lights
PLSL - gold series lights

LIL - silver series icicle curtains
PLIL - gold series icicle curtains

LCL - silver series curtains
PLCL - gold series curtains

LCLwf - waterfall effect curtains

LNL - LED net

MET - meteors

LSTL - stalactites

LRL - LED rope light
RRL - bulb rope light
LNF - NEON rope light

NOTE: If the letter designating the colour of LEDs is not followed by the designation of cable's colour, it means that the cable is by default dark, i.e. black or dark green. This type of marking can be encountered in the case of older packaging. This year we also introduce a change in the marking of a blue cable from "B" to Blue. The "B" marking now refers to black cable.

LED STRING LIGHTS INDOOR, OUTDOOR, ALL PURPOSE

CHRISTMAS LIGHTING

LED STRING LIGHTS 6 M

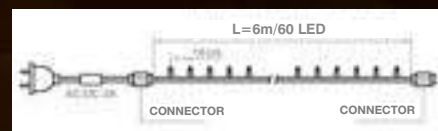

indoor use

1,7 WAT	230 V	60 LED	6 m	360°	A
----------------	--------------	---------------	------------	-------------	----------

Light angle	360°
Splash-proof	nie
Quantity of LEDs	60
Cable length	6 m
Compatibility	up to 10 sets
Power supply	230 V

PROFESSIONAL BULB ROPE NK1

NK1 bulb one channel rope light with 13 mm gauge. It illuminates with still light. Powered straight from standard power supply (220-240V) by a special cable (available in rope light accessories).

Due to a special connection, our products are compatible with products made by other companies.

There are several colours available: white, yellow, red, blue and green.

We can cut rope lights for you, or sell you a set that is ready to use. **Rope light is metered.**

Light angle	360°
Splash-proof	yes
Bulb amount per meter	36
Gauge	13 mm
Spool length	100 m
Power supply	230 V
Minimal cutting length	1 m
Metering	yes
Life span	100 000 h

All of the installations require at least few accessories in order to work properly and effectively without any problems to provide a proper illumination formula.

POLAMP LED rope lights, due to its durability, flexibility and long life are products that were meant to be used for many years. Each season you can use our rope lights to different kinds of decoration.

In our offer, you can find many LED rope light connectors, power supply and extension cables, control units, clips, heat shrink tubes, glues, handles, and plugs. We also have similar choice of professional accessories for LED string lights, curtains and nets. We offer cables for curtains, multiplugs, extension cables, handles, tensioners and steel tapes.

NEW: A version in white colour.

We produce garlands of every possible length and socket off-set. There is a possibility of using other colour. We also have a cable and sockets for prefabrication.

LED strips and modules are very practical option, if you want to have very precise illumination, enlighten some small space or create an illumination with a very outstanding shape. Different from ones that you can create with LEDs or rope lights.

Another advantage of LED strips is that they are self adhesive. It can be really helpful in fitting strips directly in a certain place or special aluminum profiles. LED strip profiles provide extra protection for LEDs. LED strips are long and narrow and can be cut in certain places which are marked on the strip (each 5cm). Because of these properties, LED strips can be used not only for illumination, but also for decorative purpose. In our offer you can find waterproof LED strips and modules (IP 68 and IP 65), which can be used outdoors, for example for shop windows, eaves, adverts, etc. Resistance to water also makes product conservation easier which increases its life span. Lower class LED strips (IP 20) can be used indoors, for example in shop illuminations, ceilings, etc. LED modules can be controlled, so we can program various effects of light animation. Perfect example of LED RGB modules in use, are giant cones.

LED MODULES - 4 EYES 30 PCS / WIRE

LED modules, due to chain connections are more practical to mount than LED strips or rope lights and are a great complement to these products. LED modules are used to interior illumination of letters, logos, signs etc.

POLAMP distributes projectors which are a part of picture projection systems. The use of modern technological solutions enables us to produce efficient, reliable, and energy-saving products.

We are able to adjust graphics, pictures, and ornaments to your needs. We offer static and animated pictures. We also have a wide range of accessories – lenses, prisms, fixings, mechanisms of rotation, colour overlays and devices for changing pictures.

POLAMP devices are used by building administrators, and owners of sports halls and shopping centres. Landscape architects ordered our various light designs, which are used in the case of streets, trees, and churches. The most visible and spectacular effects can be seen in the case of building fronts. It is becoming more and more popular on the walls of commune and municipal offices. These designs fascinate with their colours, motifs, and the range of light emitted by the projector. Children may spend hours gazing at moving stars and glowing baubles. Adults also are not unconcerned with such decorations.

Christmas season has a brand-new shape now. POLAMP meets with contemporary needs and aesthetics.

MONSTRUM 80 LED OUTSIDE PROJECTOR

80W LED outside projector. It supports the use of 2 gobos simultaneously. The displaying distance makes it possible to use the projector in the case of tall objects. The device is weather-proof. We offer a variety of gobos, depending on the occasion.

Power supply	230V AC / 50Hz

Projector with the effect of falling snowflakes, stars. 15m displaying distance. Built-in dusk to dawn sensor. Weather-proof. Ideal to be placed in a garden..

We offer high-power LUMITRIX projectors with digital mapping for lighting buildings, halls, or large interiors. Weather-proof, controlled with a smartphone. Intel i3, 4GB RAM, SSD 128GB, DLP, XGA, 4:3, 1.6-2.2 lens, connectivity: GSM-LTE, WiFi.

BICYCLE GENERATORS

A bicycle generator is a set which consists of a bicycle and a power generator. It is recommended to power bigger decorations such as Christmas trees or fountains.

We offer two types of bicycle generators

- 1) A big and massive spinning bicycle.
- 2) Standard bicycle with a support.

The way a bicycle generator works is simple.

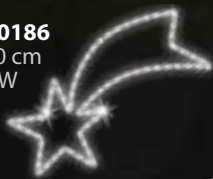

This system is powered by people who pedal. The power they generate in the batteries is sufficient to power a Christmas tree which has a few metres of height.

Modern LED lights do not consume as much power as standard light bulbs. For example, a single LED consumes 0,3W, thus a set of 300 LED lights consumes as much power as a 100W standard light bulb. As a result, there is no need to put a lot of effort to power a Christmas tree, a fountain, etc.
